

As a licensed US Amateur radio operator, I am opposed to the BPL proposal as it will directly impair the ability of amateur radio operators in the US and throughout the world to serve the public and their hobby. BPL would directly impact this with the proposed frequency use of 2-80 MHz. The amount of radio noise generated by BPL would severely limit the Amateur community's efforts to serve the public and pursue their hobby.

I oppose the use of power lines for broadband data transmission.

Sincerely,

Michael Kirk
